Appendix	10

1 Theoretical Background

This APA7 template for L^AT_EX offers many features that will be demonstrated in this document. Just refer to the L^AT_EX code to reproduce or modify these features by yourself.

As you have already seen, paragraphs, demarked by an empty line above and below in the source-script, are indented by 0.5in.

The page is A4 size and the margins are set at 1in.

1.1 Formatting headings

Headings of different levels can easily be used, numbering is automatic.

1.2 Citation and Quotes in APA7-style

For citations, the biblatex package is used with the biber backend and apa7 style. To cite a source, first enter the reference in BibTeX format into the references.bib file. For demonstration purposes, we will use two sources. Remember: A reference only appears in the text and in the bibliography, if it is referenced in the text.

1.2.1 In Text citations in APA7 style To understand how this works, check the corresponding L^AT_EX code.

In this sentence, we add a reference in paranthesis after the sentence has ended (Tversky & Kahneman, 1974).

Here however, we note the contributions of Einstein (1905) to science in the middle of the sentence. Note, that this command is defined only in this template and cannot be used without copying the definition. Tipp: You can click the year of the citation to jump to the bibliography entry.

1.2.2 Block quotes In APA7 style, any quote longer than 30 words should be formatted in an intended block

This is such a block quote. Implementing this into you thesis is very easy thanks to L^AT_EX. The indentation for these quotes can be changed in the main document's preamble.

2 Methodology

2.1 Tables

Tables are vital for any thesis. While L^AT_EX does not offer the same ease in mocking up tables quickly, the tables turn out much neater and less often destroy your layout than in Word or similar programs. Writing the tables entirely by hand is not recommended, it is much faster and more seamless to use online L^AT_EX table generation sites. Then just copy the code here and customize.

Note, that tables in APA7 should use horizontal lines sparingly and avoid vertical lines entirely. The APA7 documentclass numbers the tables automatically and the captions and tablenotes are italicized as required. This is what a table in APA7 style can look like:

Table 1

Descriptive characteristics of experimental groups on Big5 factors

Factor	<i>M [SD]</i>	
	Group A	Group B
Agreeableness	7.13 [2.11]	10.95 [1.74]
Extraversion	3.54 [0.54]	2.22 [4.87]
Openness	4.33 [6.32]	1.64 [3.22]
Neuroticism	2.59 [3.99]	5.66 [1.16]
Concioussness	3.88 [1.04]	3.32 [4.38]

Note. Data are made up.

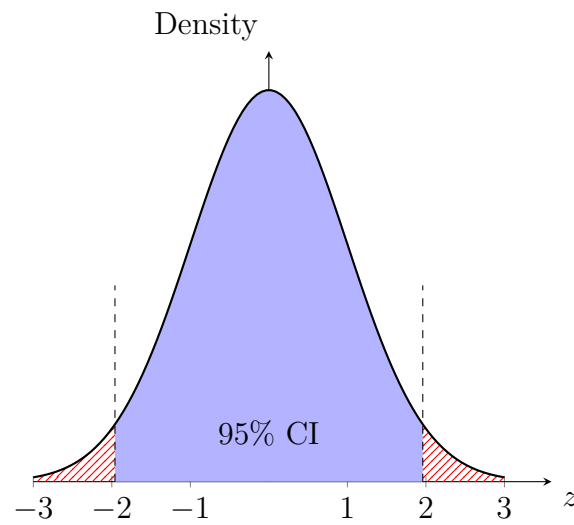

3 Results

3.1 Figures

3.1.1 Mathematical Figures Because the primary usecase for \LaTeX is the usage in natural sciences and STEM subjects, there are features to display complex mathematical illustrations.

Figure 1

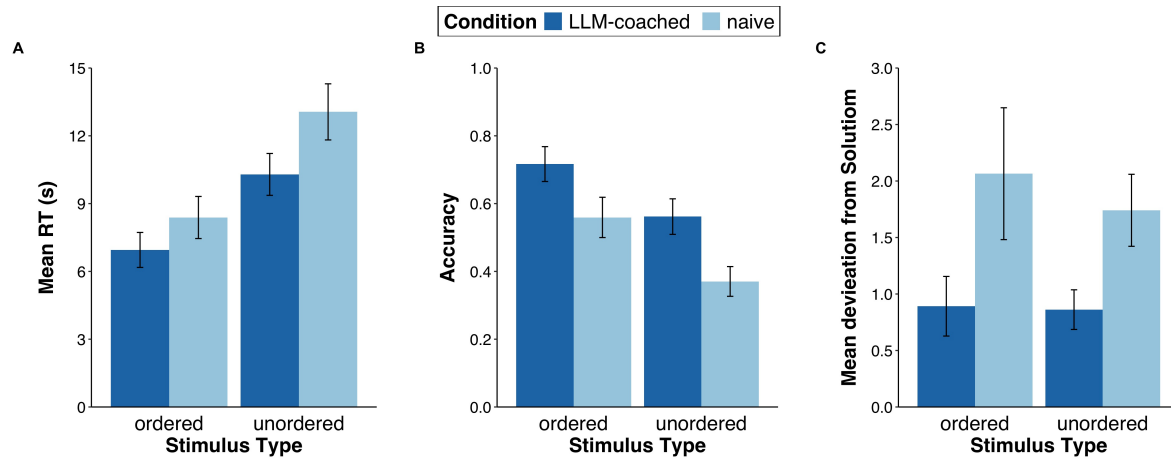

Visualization of a normal distribution with the 95% confidence interval shaded in blue and rejection regions in red.

3.1.2 External Figures External image files like .png or .jpg images can easily be added and automatically numbered as well. Note that the image file should be in the project folder to refer to it.

Figure 2

An example figure

4 Discussion

Appendix

Additional material

If there is one section in the appendix, the appendix is not enumerated. However, if you add another section to the appendix, they are then labeled alphabetically.

Declaration of Authorship

I, YOUR NAME, declare that this thesis titled "[Thesis Title]" is my own work. I have not used any sources, tools, or assistance other than those explicitly acknowledged in the text.

All sources that I have quoted, paraphrased, or otherwise drawn upon are properly cited. This thesis complies with the academic integrity guidelines of [University Name].
